

# Cybersecuritywebtest Help

Click on the "My Projects" section and click on the "Add New Site" button. In this section you can add your site to check the security issues. You can choose when you want to start immediately or you can choose the day to start. Also the payment is via paypal, so if you have a valid credit/debit card you can pay with this via PayPal.

After you have added more than one site you will be able to see the statistics on the "dashboard" section. Also after the website is scanned you can download the results in PDF format from the dashboard section.

In the header (your profile) section you can change your password and also there you can see exactly your history.

If you have more sites to scan, you have the option to buy more credits from the "Payments" section. If you need more than 100 credits, please do not hesitate and contact us, and we will give you a solution via paypal or via wire transfer. Because in some countries the PayPal is not accepted, please do not hesitate to contact us and we can solve this situation via wire transfer.

In the section "API" you can have the possibility to integrate this API in your software, or on your application. Before having access you need to add access to your IP address with "Add WhiteList IP".
